Download the software again from this link. Latest Forum Posts Hello everyone! I am new to this forum so let me explain what my problem is. I have a two-partition hard drive with WinXp on the first partition, and Ubuntu 9.04 on the second one. I wanted to install a new version of Ubuntu (9.10 Karmic Koala) but I had a few problems with my first try, so I decided to create a new partition on the same hard drive. So here is how it happened: 1) I had no problems with installing Ubuntu 8.10 Intrepid Ibex. My partitioning scheme was: a) 250 GB NTFS for XP and b) 30 GB ext3 for Ubuntu. 2) When I tried to install 9.04 Jaunty Jackalope, I had problems with booting the live CD: my computer went to sleep and never woke up. The first suspicion that came to my mind was the BIOS settings. So I changed the settings and got the same problem. That didn't help either. 3) I decided to check the fstab file and noticed the next thing in it: UUID=9CBE6607BE6607D4 / media auto,user,exec,utf8 0 0 and I wasn't sure what to do. So I got some help from a forum and all I did to solve my problem was to replace the uuid I got on the website (in the given file) with the one on my hard drive. I also had to add a "LABEL=boot" at the end of the fstab line. 4) Now I could boot the live CD for 9.04! I don't know why I had this problem in the first place, but I hope this helps to solve your problems too. Best regards, mikey As many of you know, GTA.

What's New in the Ranish Partition Manager?

The best partition manager for Windows Partition your hard disk easily and quickly with this free partition manager, which supports the following operations: Create, delete, edit and change file system types. Create, delete, edit and change partitions. Compare, rename, delete, create and modify files. Copy partition content to another partition. Resize, merge and split partitions. Ranish Partition Manager Supports These Browsers: Internet Explorer 9+ Google Chrome Mozilla Firefox Safari Opera Other Versions: Prior to Version 0.6.6 the installer was only a portable application without a menu, so you could only run it from a floppy disk. And there was no installer for Linux or Mac systems. The problem has now been solved. Limitations: The program is not compatible with Linux, XP, Vista, XP64, and any other Windows version older than Windows 2000. In order to use this software on other operating systems, the license of the program must be changed to a freeware license (click the link "Free Software" on the top of the page). This product is the property of the author Robert Lang. This may not be resold. You are not allowed to print, copy or modify this page without the express written consent of the author or "Ranish Partition Manager". Ranish Partition Manager features: Create, delete, edit and change file system types Create, delete, edit and change partitions Create, delete, edit and change file systems Confirm file system types Compare, rename, delete, create and modify files Copy partition content to another partition Resize, merge and split partitions This software automatically detects the number of hard disks on your system and their size, as well as the number of cylinders, heads and sectors. You have seven slots at your disposal to create multiple partitions. When selecting a new slot, the partitioning wizard guides you through the creating process. First, you have to select the file system type, by choosing between FAT-16, FAT-32, Extended, BeOS, Linux or Linux Swap. Thus, this small program can help you install and boot Linux and multiple copies of Windows on your computer. Once you do this, you can set the desired parameters, such as size,
